DevOps Platform Engineer

London, UK |

Personal Profile

Cloud/DevOps Engineer with a Computer Science background, specialising in Azure, Terraform, and CI/CD governance. Currently primary maintainer of the IaC and infrastructure for a mission-critical global oil & gas fuel card billing platform, acting as technical authority and key reviewer of IaC codebase across non-production and production environments. Certified Azure Administrator and advocate for safe and controlled agentic AI development, leveraging modern AI tooling to accelerate delivery whilst upholding governance, quality, and DevOps maturity across high-impact programmes.

Experience

CGI, London

September 2022 – Present

DevOps Platform Engineer III March 2026 – Present

- Primary maintainer of the IaC and deployed infrastructure for a global oil & gas fuel card billing system, ensuring secure, scalable, and reliable infrastructure across non-production and production environments for a 24/7 batch-based, mission-critical platform.
- Championing the safe and controlled adoption of agentic AI development practices to accelerate delivery whilst maintaining governance, code quality, and security standards.
- Primary engineer for all DevOps pipelines and release optimisation: lead hardening of CI/CD pipelines, improving deployment efficiency, introducing Kubernetes-based workload orchestration, enforcing security controls, and ensuring consistent, low-risk releases.
- Act as technical authority and approve infrastructure and code changes from CGI and client engineers, maintaining high engineering standards.
- Coordinate releases across platform, infrastructure, and client stakeholders, ensuring alignment with operational, security, and compliance requirements.
- Established governance practices through a Kanban-based change management model, improving delivery visibility, accountability, and cross-team coordination.
- Drive automation and standardisation strategy using Terraform and PowerShell, reducing manual effort and ensuring consistency across environments.
- Influencing design decisions and guiding teams on best practices across the programme.
- Mentored junior engineers and contributed to Agile delivery across cross-functional teams.

DevOps Platform Engineer II November 2025 – March 2026

- Key engineer maintaining and improving five production-grade environments with a focus on availability, resilience, and compliance.
- Led Azure cost optimisation initiatives using automation (shutdown schedules, tagging, utilisation tracking).
- Delivered a domain-integrated software deployment framework for internal tooling on Windows VMs.
- Enhanced modular GitHub Actions CI/CD pipeline deployment safety and policy controls.
- Introduced agentic AI coding workflows to the team, applying best practices to improve developer productivity in a controlled manner.
- Extended Terraform codebase with reusable modules and strengthened environment governance.
- Supported Kubernetes deployments and resource tuning for containerised workloads.
- Supported firewall governance and Windows domain operations including GPO management.

Junior DevOps Platform Engineer – Technical Graduate August 2024 – October 2025

- Deployed and maintained infrastructure across multiple IaaS environments supporting a live production system.
- Rewrote the full infrastructure deployment pipeline to enhance security, efficiency, and operational alignment.
- Automated recurring operational tasks using PowerShell and Python, reducing manual effort and improving reliability.
- Provisioned cloud infrastructure using Terraform across multiple environments.

- Diagnosed and resolved deployment issues, preventing downtime and improving reliability across environments.

Junior Cloud Engineer – IP September 2022 – September 2023

- Supported migration of a global payment solution from on premises to Azure using a microservices architecture.
- Designed and provisioned cloud environments using Terraform from POC through to production, including a Disaster Recovery (DR) solution for a microservices platform.
- Developed PowerShell scripts for large-scale Azure server configuration.
- Built and maintained Azure DevOps CI/CD pipelines for automated deployments.
- Delivered across Agile and Waterfall models; performed testing and debugging to resolve deployment and runtime issues.

Education

City, University of London – BSc Computer Science September 2020 – May 2024
Upper Second-Class Honours

Certifications

Kubernetes Certified Administrator
AWS Solution Architect Associate
Kubernetes and Cloud Native Associate
Microsoft Azure Administrator Associate
HashiCorp Terraform Associate
Microsoft Azure Data Fundamentals
Microsoft Azure Fundamentals

Technical Skills

Microsoft Azure	Python	YAML	Java
AWS (Foundational)	GitHub Actions	Kubernetes	JavaScript
Terraform	CI/CD	Windows Server	Agile
PowerShell	Docker	Active Directory	Kanban
Azure CLI	Docker Compose	GPOs	Agentic AI
Az PowerShell	Linux	SQL	Development

Projects

Sabr Labs – Birth Your Way React, TypeScript, Go, MongoDB, Azure

- Co-founded and built a full-stack birth planning platform for expecting parents to create, manage, and share personalised birth plans with healthcare providers.
- Used AI tooling throughout development to accelerate delivery, validate architecture decisions, and ensure code quality across the full stack.

Sabr Labs – Life Vault Electron, React, TypeScript, Bun, Vite, Cloudflare

- Co-built a cross-platform Electron desktop app for organising personal and family documents across local and cloud storage.
- Leveraged AI tooling to accelerate development, validate design decisions, and effectively build features end-to-end with a small team.

RepoMerge, Git Repository Aggregator React, Node.js, MSSQL, Git, GitHub

- Web app for aggregating and managing multiple Git repositories from a single interface.
- Intuitive dashboard for monitoring cross-repository activity.

Achievements, Interests and Hobbies

Running a home lab where I self-host services, experiment with infrastructure, and explore new tools keeps me sharp outside of work. I actively engage with my local community by attending and speaking at career fairs to support young people exploring tech careers. I've competed in national-level chess tournaments, earned a black belt in Shotokan Karate, and stay active through tennis, swimming, and badminton.
